Project Abstract Submission Form

Sec No- 12	Team No- 24	Project Title-Event Management Moblie Application for Attendee Self-Service
-----------------------	------------------------	--

1. Abstract

Event Management Mobile Application for Attendee Self-Service is designed to provide a simple and convenient way for attendees to manage their event activities through a mobile application. In traditional event management, attendees often depend on organizers for registration, ticket verification, check-in, schedules, and event updates. These manual processes can lead to long waiting times, confusion, and increased workload for event staff.

The proposed application provides self-service facilities that allow attendees to access important event services in one place. Users can create an account, log in, browse available events, view event details, and register for events. After registration, users can access a digital ticket containing a QR code, which can be used for quick and easy check-in at the event venue. The application also allows attendees to view event schedules and receive notifications about important announcements, reminders, and changes.

The system aims to reduce manual work for event organizers and improve the overall experience for attendees. By providing digital registration, ticket management, QR-based check-in, schedules, and notifications, the application makes event participation faster, easier, and more organized. The proposed mobile application provides an efficient self-service platform for attendees while helping organizers manage events effectively.

1. Team Details

Roll Number(s)	Name of the Student	Signature
2520090053	P.Srija	
2520090057	P.Praveena	
2520090221	D.Varun Teja Reddy	

3. Frameworks / Platforms / Software Used

- **Android Studio** – Mobile application development
- **Java** – Application programming
- **XML** – User interface design
- **MySQL** – Database management
- **QR Code Scanner** – Digital ticket and check-in

Guide Name and Signature (remarks if any) _____
